PF Awareness Month
September 2021

#BreathingLife
#PFMonth
Pulmonary Fibrosis (PF) is a progressive, irreversible, chronic lung disease with no known cure. In Europe it currently affects more than 300,000 people with over 50,000 losing their lives to PF each year.

PF Awareness Month which takes place every year in September wants to draw attention to PF, the changes it brings about in daily life and the physical and psychological strain it places on patients and their loved ones – but also to the moments of light-heartedness and happiness that PF patients still experience despite this burden.

Thank you for joining us and using #BreathingLife and #PFMonth to share your story and help raise awareness for PF!
